Most Important Questions

INSTRUCTIONS

1. Understand the Concepts

Go through the basic concepts related to each question before practising.

2. Practice Regularly

Solve these important questions and their variations for better understanding.

3. Focus on Exam Pattern

These questions are selected as per previous year papers and latest syllabus.

4. Attempt Within Time Limit

Practice under timed conditions to improve speed and accuracy.

5. Revise and Self-Check

Review your answers, identify weak areas and revise regularly to score higher.

Learn • Practice • Improve • Succeed

YOUR HARD WORK PAYS OFF!

Python Programming — Most Important Questions

Unit I - Introduction to Python

- **Answers in one or two lines (1 mark questions)**

1. What is Python?
2. Who developed Python?
3. State any two features of Python.
4. What is Anaconda Python Distribution?
5. What is PyCharm?
6. What is Python Development Environment?
7. What is an identifier?
8. What is a keyword?
9. What is a variable?
10. What is an operator?
11. What is an expression?
12. What is operator precedence?
13. What is associativity?

- **Short Answer Questions (3 marks questions)**

1. Explain the history of Python and its features.
2. Explain the advantages of Python.
3. Explain the installation and setup of Python using Anaconda/PyCharm.
4. Explain identifiers, keywords, variables and expressions in Python.
5. Explain operators and their types.
6. Explain operator precedence and associativity.

- **Long Answer Questions (6 marks questions)**

1. Explain the history, features and advantages of Python.
2. Explain Python development environment and the installation of Anaconda/PyCharm.
3. Explain identifiers, keywords, statements, expressions, variables and operators with examples.
4. Explain operator precedence and associativity with suitable examples.

Unit II - Data Types & Control Flow

- **Answers in one or two lines (1 mark questions)**

1. What is a data type?
2. Name the basic data types in Python.
3. What is type conversion?
4. What is the `type()` function?
5. What is an input statement?
6. What is an output statement?
7. What is the `if` statement?
8. What is an `if-else` statement?
9. What is a nested `if` statement?
10. What is a `while` loop?
11. What is a `for` loop?
12. What is the `break` statement?
13. What is the `continue` statement?

- **Short Answer Questions (3 marks questions)**

1. Explain Python data types with examples.
2. Explain type conversion in Python.
3. Explain `type()` and `id()` functions.
4. Explain `if`, `if-else` and `if-elif-else` statements.
5. Explain nested `if` statements.
6. Explain `while` and `for` loops with examples.
7. Explain `break` and `continue` statements.

- **Long Answer Questions (6 marks questions)**

1. Explain Python data types and type conversion with examples.
2. Explain decision control statements in Python with suitable examples.
3. Explain looping statements — while and for — with examples.
4. Explain if, if-else, if-elif-else and nested-if statements.
5. Explain loop control statements: break and continue.

Unit III - Functions

- **Answers in one or two lines (1 mark questions)**

1. What is a function?
2. What is a built-in function?
3. What is a user-defined function?
4. What is a function definition?
5. What is function calling?
6. What is a return statement?
7. What is a void function?
8. What is a default parameter?
9. What is a keyword argument?
10. What is `*args`?
11. What is `**kwargs`?
12. What are command-line arguments?
13. What is variable scope?

- **Short Answer Questions (3 marks questions)**

1. Explain built-in and user-defined functions.
2. Explain function definition and function calling.
3. Explain return statement and void functions.
4. Explain scope and lifetime of variables.
5. Explain default parameters and keyword arguments.
6. Explain `*args` and `**kwargs` with examples.
7. Explain command-line arguments.
8. Write a short note on commonly used Python modules.

- **Long Answer Questions (6 marks questions)**

1. Explain functions in Python with definition, calling and return statement.
2. Explain different types of function arguments: default, keyword, `*args` and `**kwargs`.
3. Explain scope and lifetime of variables with suitable examples.
4. Explain built-in functions and commonly used Python modules.
5. Explain command-line arguments with a suitable example.

Unit IV - Strings

- **Answers in one or two lines (1 mark questions)**

1. What is a string?
2. How are strings created in Python?
3. How are strings stored?
4. What is string indexing?
5. What is string slicing?
6. What is string joining?
7. How can a character be accessed from a string?
8. What is a string operation?

- **Short Answer Questions (3 marks questions)**

1. Explain creation and storing of strings.
2. Explain basic string operations.
3. Explain accessing characters in a string using index numbers.
4. Explain string slicing with examples.
5. Explain joining of strings with examples.

- **Long Answer Questions (6 marks questions)**

1. Explain strings in Python and basic string operations with examples.
2. Explain string indexing and slicing with suitable examples.
3. Explain string joining and accessing characters using index numbers.
4. Explain different operations performed on strings in Python.
